Experts Evaluation Form based on McCall's Software Quality Model

Capstone Title : _____
Proponents : _____
Expert Evaluator : _____
Date : _____

Please evaluate the system according to the following software quality factors. Encircle or check the rating that best represents your assessment. Provide comments where necessary. Use the verbal interpretation below as your guide.

Rating Scale with verbal interpretation

Scale Verbal Interpretation

- 5 — Excellent – Exceeds expectations; no or minimal improvement needed
- 4 — Good – Meets expectations; minor improvements suggested
- 3 — Fair – Acceptable but needs noticeable improvement
- 2 — Poor – Does not meet expectations; major improvements required
- 1 — Very Poor – Fails to meet expectations

A. Product Operation Factors					
1. Correctness: ○ The system meets the functional requirements. ○ The outputs generated are accurate and reliable.	1	2	3	4	5
2. Reliability ○ Does the system perform consistently without failure? ○ Is error handling effective?	1	2	3	4	5
3. Efficiency ○ Does the system respond quickly and optimize resources? ○ Are processes efficient and minimizing delays?	1	2	3	4	5
4. Integrity (Security) ○ Is data secured from unauthorized access? ○ Are authentication and validation properly implemented?	1	2	3	4	5
5. Usability	1	2	3	4	5

I-TECH COLLEGE BAGO CITY, INC

Bago City, 6101

○ Is the system interface user-friendly and intuitive? ○ Can users operate the system with minimal training?					
B. Product Revision Factors					
6. Maintainability ○ Can the system be easily fixed or updated? ○ Does documentation support troubleshooting?	1	2	3	4	5
7. Flexibility ○ Can the system adapt to new requirements or changes? ○ Are modifications easy to implement?	1	2	3	4	5
8. Testability ○ Can the system be tested thoroughly? ○ Are testing procedures effective?	1	2	3	4	5
C. Product Transition Factors					
9. Portability ○ Can the system run across different platforms (PC, web, mobile)? ○ Is installation and setup manageable?	1	2	3	4	5
10. Reusability ○ Can components be reused in other applications? ○ Is the code/design modular and reusable?	1	2	3	4	5
11. Interoperability ○ Does the system integrate with other software or databases? ○ Is data exchange with external systems supported?	1	2	3	4	5
