

COURSE SYLLABUS

BACHELOR OF SCIENCE IN INFORMATION SYSTEMS (BSIS) CAPSTONE 2

Year & Section: 4th Year – Section E

Course	CAPSTONE 2
Course Code	CAP413
Program	Bachelor of Science in Information Systems (BSIS)
Year & Section	4th Year – Section E
Course Type	Major / Capstone Course
Suggested Term	Second Semester / Senior Year
Credit Units	3 Units
Prerequisite	Capstone Project 1

I. Course Description

Capstone 2 focuses on the completion and implementation of an Information Systems project. Students apply systems analysis, design, programming, database management, testing, documentation, and presentation skills to develop a functional system that addresses an identified organizational or institutional need.

II. Course Learning Outcomes

ILO	At the end of the course, students should be able to:
ILO 1	Complete and implement an Information Systems project based on approved requirements and design specifications.
ILO 2	Integrate application, database, and user-interface components into a functional system.
ILO 3	Conduct system testing, identify defects, and apply necessary improvements.
ILO 4	Evaluate the system using appropriate software quality and user-evaluation criteria.
ILO 5	Prepare technical documentation and project reports for the completed system.
ILO 6	Demonstrate and defend the completed system and explain its contribution to the identified problem.

III. Weekly Topics and Syllabus Mapping

Week	Topic / Lesson	Learning Activity	Assessment
1	Project Review and Requirements	Review approved project scope and requirements	Requirements checklist
2	System Design Review	Review architecture, database, and interface design	Design review
3	System Development	Implement core system modules	Development output
4	Database Integration	Implement and test database functions	Database test
5	Module Integration	Connect and integrate system modules	Integration test
6	User Interface and Usability	Improve interface and user flow	Usability review
7	System Testing	Conduct functional and integration testing	Test results
8	Midterm Project Evaluation	Demonstrate current system status	Project evaluation
9	System Refinement	Fix identified errors and improve functions	Revision output

Week	Topic / Lesson	Learning Activity	Assessment
10	User Acceptance Testing	Conduct user testing and gather feedback	UAT results
11	System Quality Evaluation	Evaluate usability, reliability, efficiency, and correctness	Evaluation questionnaire
12	Documentation	Prepare technical and user documentation	Documentation draft
13	Final System Preparation	Finalize modules, database, and interface	Final system check
14	Final Demonstration	Present and demonstrate the completed system	System demonstration
15	Capstone Presentation	Present project findings and outputs	Presentation
16	Defense and Final Submission	Defend project and submit final requirements	Final defense/submission

IV. Learning Resources

- Course modules and instructor-provided materials
- Approved capstone proposal and project documentation
- Programming and database development resources
- Testing and evaluation instruments
- Institutional guidelines for capstone projects

V. Assessment Methods

Project development and implementation – 30%

System testing and evaluation – 20%

Documentation – 20%

Presentation and demonstration – 15%

Final defense and submission – 15%

VI. General Requirements

Students are expected to participate in consultations, complete assigned project outputs, maintain project documentation, conduct required testing and evaluation, and submit the final system and supporting documents according to the instructor's approved schedule.

VII. References

References may include approved course materials, institutional capstone guidelines, software documentation, research articles, and other resources identified by the instructor.
